

Absorption Water Chillers & Co-Generation

The Science
The Mystery
The Art

Absorption Chiller Layout

The Science - Engineering

- ▶ Generators are typically sized first – waste heat allowance.
- ▶ Calculation Safety Factors – Part Load Issues
- ▶ Chiller Configuration – Parallel, Series
- ▶ Chiller Size – Cold Water
- ▶ Chiller Weight
- ▶ Generator Noise Control

The Mystery - Commissioning

- ▶ Effective control system is a must
- ▶ Non - Condensables
- ▶ Deep Vacuum
- ▶ Corrosion
- ▶ Varying Building Load
- ▶ Varying Condenser Water
- ▶ Interruptions in Power Supply
- ▶ Crystallization, How and Why and Where

LiBr Crystallization

- ▶ Absorption Solution Temperature
- ▶ Absorber Solution Pump
- ▶ LiBr Heat Exchanger
- ▶ Interconnection Pipes

The Art - Operation

- ▶ Stable and sizable loads
- ▶ Stable Condenser Water Temperature
- ▶ Stable Exhaust Gas Temperatures
- ▶ Long Start Up and Shut Down Cycles
- ▶ Low Condenser Water Temperatures Issues
- ▶ Loss of Vacuum Issues
- ▶ Solution - Water Ratio's

Overview

- ▶ Know the generator flue gas capacities
- ▶ Watch your safety factors
- ▶ Chiller staging can be an issue
- ▶ What is HLI and LLI requirements for the absorber
- ▶ LiBr – Water ratio
- ▶ Chiller Vacuum
- ▶ Solution Temperature

Thank You
