

Data and Visualisation

Changing the way we understand our buildings

Hux
Get productive.

What inhibits better outcomes for mid-tier buildings?

- **Cost and complexity** of comprehensive solutions
- **Inconsistency** between facility management **skill sets** and those required by systems
- **Split incentives** between those making infrastructure decisions and those occupying spaces
- More **cost-focused approach** to building control
- The list goes on...

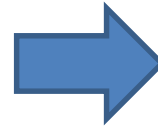

So what are our objectives?

- **Lower the cost** of getting good, comprehensive information
- **Lower the expertise required** to understand and act of this information
- **Incorporate all of the factors** that might improve the decisions being made, and focus on ways to direct these decisions to produce better outcomes
- **Join the dots** between action and effect, tightening the feedback loop
- Present information in a dynamic way that allows for **business cases to be both made and demonstrated**

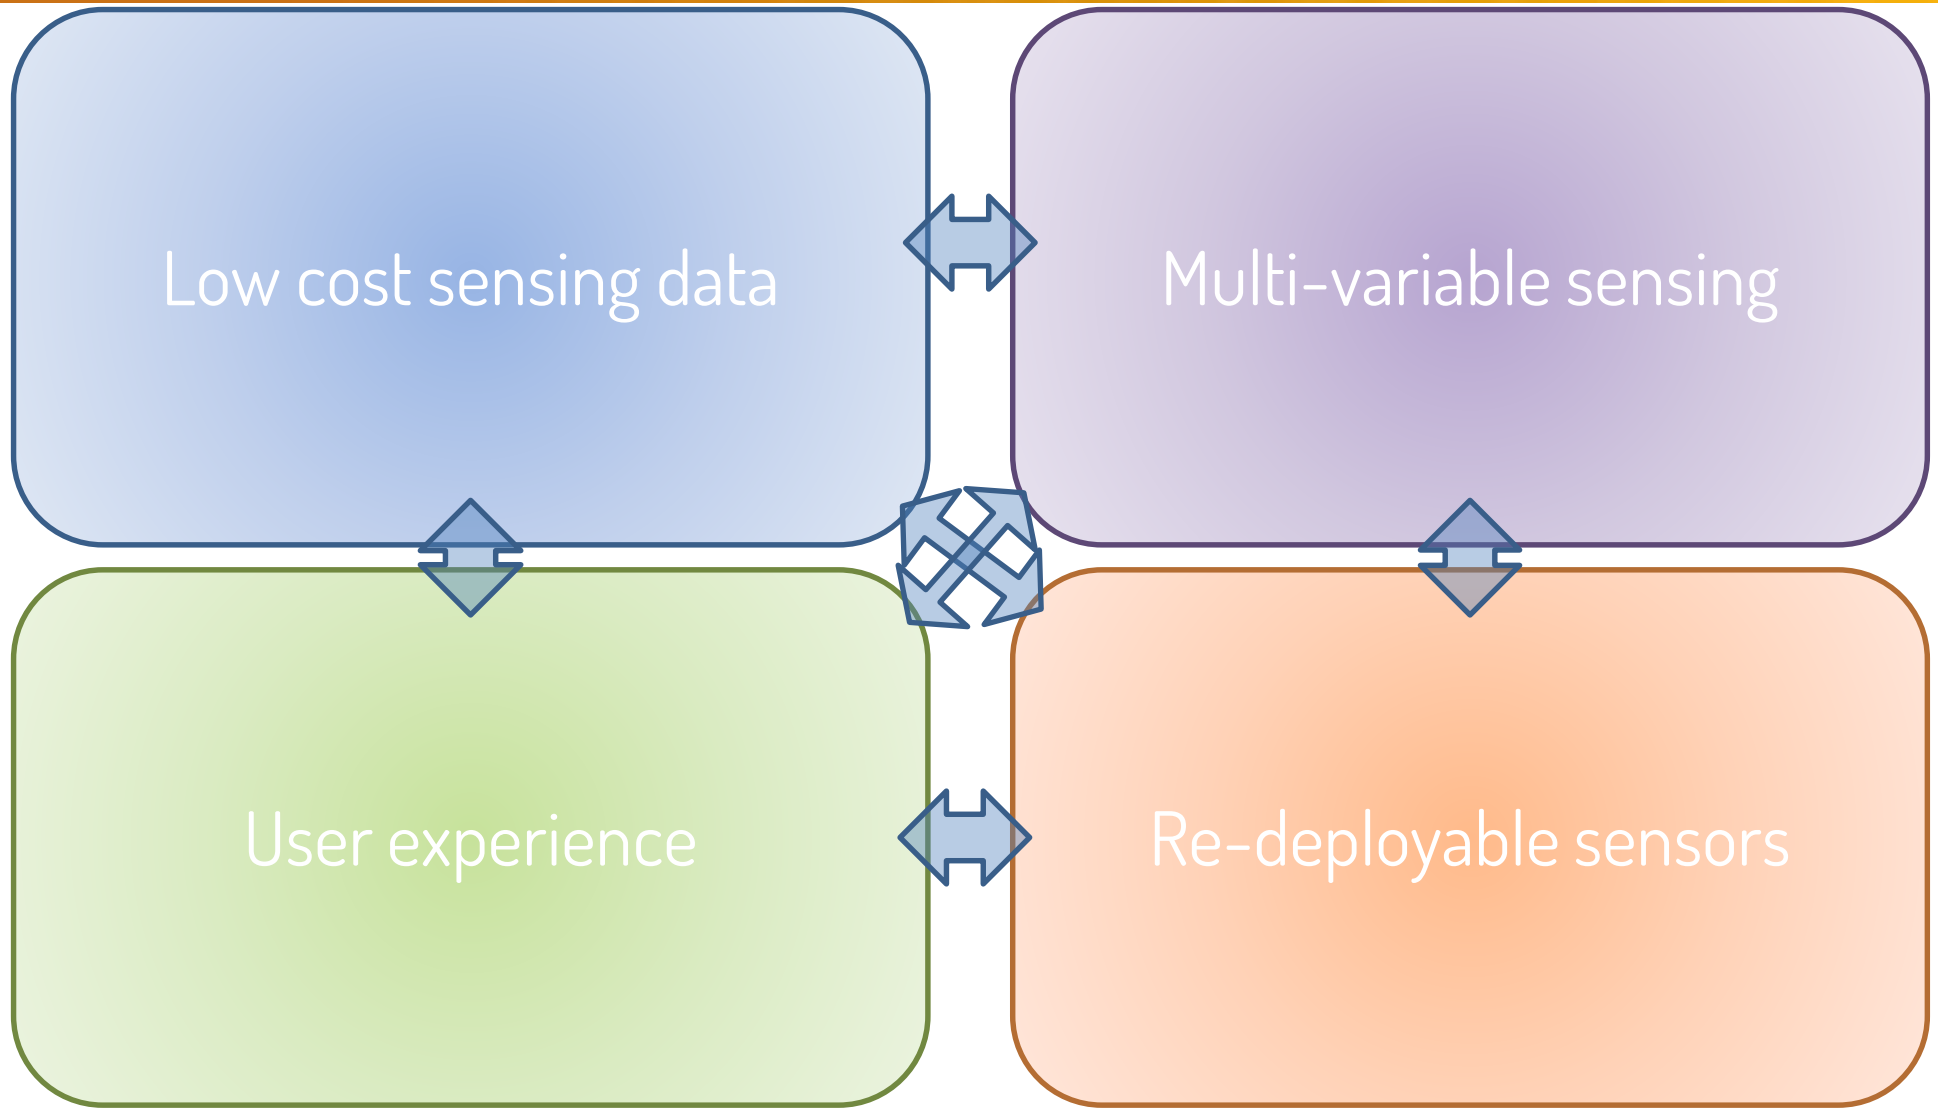

So what are our objectives?

- **Lower the cost** of getting good, comprehensive information
- **Lower the expertise required** to understand and act of this information
- **Incorporate all of the factors** that might improve the decisions being made, and focus on ways to direct these decisions to produce better outcomes
- **Join the dots** between action and effect, tightening the feedback loop
- Present information in a dynamic way that allows for **business cases to be both made and demonstrated**

Create an environment that allows and encourages **experimentation and innovation**

So what are our solutions?

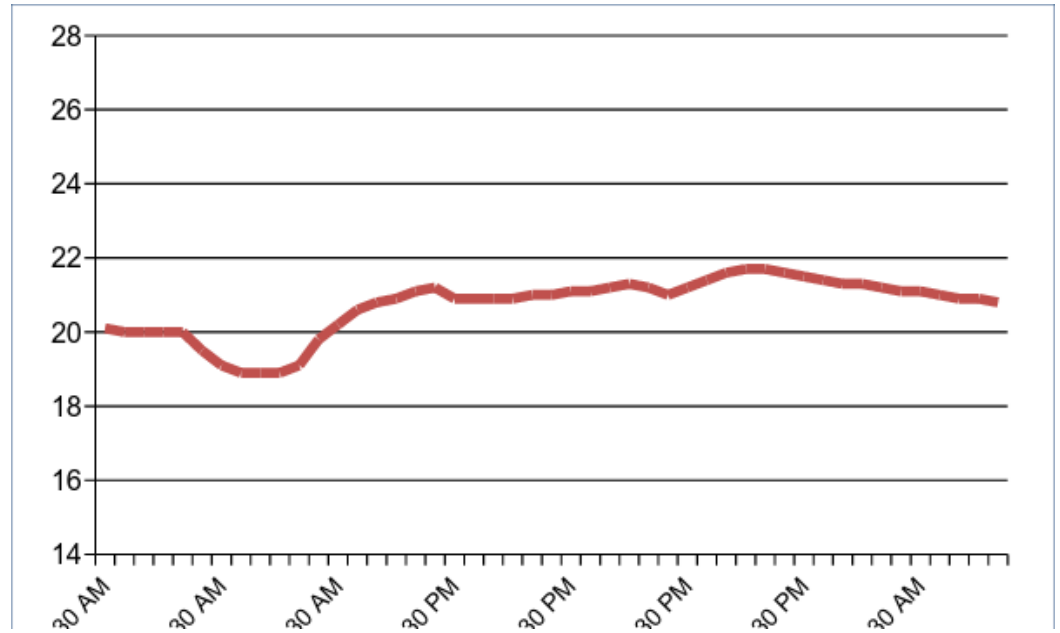

So what are our solutions?

User experience

User eXperience

- **Improved workflow**
- **Concise definition of tasks**
- **Less Training**

Through better interfaces people are more inclined to experiment and engage with the data, leading to unexpected outcomes

Our platform

Our platform

- Independent of the user's network - 3G connection
- Self organising wireless network, using BLE
- Multi-variable measuring
- Aggregates in the cloud
- Accessible through a web portal
- Tablet software to setup and modify
